

CAEL FINDLEY

Software Engineering Intern Candidate | Computer Science | AI & Full Stack

EDUCATION

Texas A&M University | College Station, TX
Bachelor of Science in Computer Science (Computer Engineering focus)

Expected May 2030

CERTIFICATIONS

Certiport Information Technology Specialist (ITS): **Artificial Intelligence, Cloud Computing, Python** (current through May 2031), and **Java**

HONORS & COMPETITION HIGHLIGHTS

- 4th place, 2026 UIL Computer Science State Competition; advanced to UIL Academics State
- 4th place nationally, BPA Python Programming; BPA Nationals qualifier; Network Design team National Alternate
- FIRST Robotics (Fiddlerbots 7788) state qualifier; Head Technician 2019–2022, Academics Team Lead 2023–2025
- Four 2nd-place finishes, UIL Computer Science regional competition (team)

EXPERIENCE

AI Software Engineering Contributor | Handshake AI | Project Dynamo

2026

Remote

- Completed software engineering and code evaluation tasks across real world codebases and programming problems.
- Designed, implemented, debugged, and reviewed solutions using TypeScript, JavaScript, Python, Java, C, C++, React, SQL, and related development tools.
- Used AI coding agents as part of an engineering workflow while independently validating generated code, identifying defects, and improving implementation quality.
- Worked across unfamiliar repositories and requirements, adapting quickly to existing architectures, tests, interfaces, and engineering constraints.

IT Specialist / Full Stack Developer | Three Sisters Oyster Co.

2025–2026

Port Lavaca, TX

- Built and maintained production software spanning a React web platform, Expo mobile application, Supabase backend, PostgreSQL database, authentication, APIs, and Stripe payments.
- Developed an end to end oyster growth tracking platform supporting field data collection, operational workflows, administrative tools, and offline use.
- Designed database schemas, application logic, APIs, user interfaces, and deployment infrastructure across the full stack.
- Automated repetitive business processes and developed AI assisted tooling to simplify workflows, documentation, debugging, and internal operations.

SELECTED PROJECTS

AI Framework From Scratch | C, C++, Systems Programming

github.com/cael1127/vllm

- Built an AI and machine learning framework from the ground up, implementing core tensor operations, automatic differentiation, transformer components, and model execution while exploring memory management and performance.

OS From Scratch | C, Assembly

github.com/cael1127/OSScratch

- Developing an operating system from the ground up to explore computer architecture, memory management, processes, hardware interaction, and low level software design.

ACF College Planner | TypeScript, React, Supabase, AI

github.com/cael1127/ACF

- Built an AI assisted college planning platform with course scheduling, professor comparison, academic planning, and data driven recommendations using a full stack architecture.

UILCSAC (UIL Computer Science Academy) | TypeScript, Java, Supabase — Founder/Developer

github.com/cael1127/UILCSAC

- Built a programming education platform combining an interactive Java coding environment, learning resources, and competitive programming workflows with frontend, backend, database, and tooling integration.

TECHNICAL SKILLS

Languages: C, C++, Rust, Java, Python, TypeScript, JavaScript, SQL, HTML, CSS, Assembly

Frontend: React, Next.js, Vue, Angular, Expo

Backend & Data: Node.js, PostgreSQL, Supabase, Prisma, MySQL, REST APIs

AI & ML: Neural Networks, Transformers, LLMs, AI Agents, Machine Learning, Model Development

Infrastructure: Git, GitHub Actions, Docker, AWS, Netlify, Linux, Windows

Engineering: Full Stack Engineering, Systems Programming, Database Design, API Development, Debugging, Testing
